

# Stencil Project

Cut out a shape from thin plastic. You can use part of a plastic sheet protector or a plastic folder. Place the plastic shape on a sheet of plain paper or cardstock. Draw some marker on the shape. Dip the sponge into water to get it wet. Squeeze out most of the water.

Drag the damp sponge over the inked shape and onto the paper. Remove the plastic shape to see your stencil print. Repeat with other colors.

Overlap the shapes until you fill the paper.
